

ZUFSP Polyclonal Antibody

Catalog Number:E-AB-18476

Note: Centrifuge before opening to ensure complete recovery of vial contents.

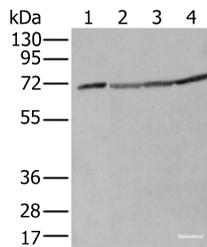

Description

Reactivity	Human, Mouse, Rat
Immunogen	Fusion protein of human ZUFSP
Host	Rabbit
Isotype	IgG
Purification	Antigen affinity purification
Conjugation	Unconjugated
Formulation	PBS with 0.05% NaN ₃ and 40% Glycerol,pH7.4

Applications Recommended Dilution

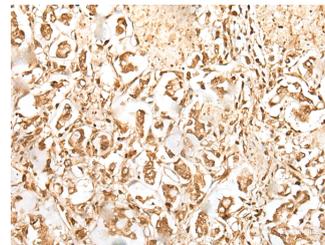

WB	1:500-1:2000
IHC	1:25-1:100

Data

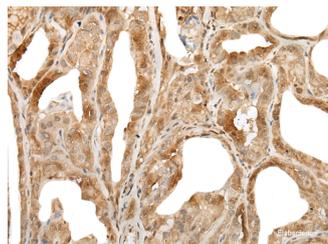

Western blot analysis of A172 Hela Hepg2 and K562 cell lysates using ZUFSP Polyclonal Antibody at dilution of 1:300

Observed Mw:Refer to figures
Calculated Mw:66 kDa

Immunohistochemistry of paraffin-embedded Human gastric cancer tissue using ZUFSP Polyclonal Antibody at dilution of 1:35(×200)

Immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using ZUFSP Polyclonal Antibody at dilution of 1:35(×200)

Preparation & Storage

Storage Store at -20°C. Avoid freeze / thaw cycles.

Background

Making up nearly 6% of the human genome, chromosome 6 contains around 1,200 genes within 170 million base pairs of sequence. Deletion of a portion of the q arm of chromosome 6 is associated with early onset intestinal cancer suggesting

the presence of a cancer susceptibility locus. Porphyria cutanea tarda is associated with chromosome 6 through the HFE gene which, when mutated, predisposes an individual to developing this porphyria. Notably, the PARK2 gene, which is associated with Parkinson's disease, and the genes encoding the major histocompatibility complex proteins, which are key molecular components of the immune system and determine predisposition to rheumatic diseases, are also located on chromosome 6. Stickler syndrome, 21-hydroxylase deficiency and maple syrup urine disease are also associated with genes on chromosome 6. A bipolar disorder susceptibility locus has been identified on the q arm of chromosome 6.
